

PLEASE READ THIS INFO BEFORE USING KOENIG POLISH

Continue to shake the can while using

Thank you for ordering Koenig Polish. We want you to be 100% satisfied with the performance of Koenig Polish on your shower doors, headlights, and everything else you use the product on. If you have ANY usage issues where the product does not exceed your expectations, **if you cannot leave us a 5 star review please call us immediately at 1-877-843-9929 so that we can rectify your issue.**

1. HEADLIGHT CLEANING

Headlight cleaning instructions for severely oxidized headlights

Please go to the link below, it has a video showing the extra steps need to clean oxidized headlights with Koenig Polish. Go through the steps with the 1500 automotive sandpaper & Koenig Polish. Then use a foam pad buffer with the Koenig spray polish for the final polish. Then buff it out by hand with a microfiber. Use Koenig spray polish once a month by hand to prevent the oxidation from coming back on all your headlights. Additional sanding and buffing may be required depending on the severity of your oxidation.

2. SHOWER DOOR CLEANING

Please go to the link below on our website to see the full shower door cleaning video and see exactly how to use size 0000 very fine steel wool to remove hard water stains with Koenig spray polish. For severely built-up hard water stains you may need to work in small sections applying extra pressure and using rapid motion in a concentrated area until the spots are gone and then move on to the next area. **If you go through the steps as recommended and it still does not remove the stains, then there's a good chance that the stains aren't standard hard water stains and are etched into the glass. This will require machine buffing with a glass polish to remove the etching and restore your glasses shine. We don't promote Koenig Polish to restore etching, only water spot, and soap scum removal from glass in good condition.** The nice thing is once you remove the water spots, you're replacing them with Carnauba wax that will repel future stains from returning with monthly maintenance of Koenig Polish.

3. BOAT, RV, CAR & AIRPLANE CLEANING

We recommend using a foam "cutting" pad buffer with Koenig Polish for best results on heavy oxidation, water spots & water line stains. Please visit our website boat page at the link below for usage videos and more info about boat detailing with Koenig Polish. Severe oxidation may require the use of a rubbing compound first then finishing with Koenig Polish to seal the surface to repel future stains
